Hno. -533, Phase-4 Premier Orchard Colony Near Peoples Mall Bhopal, MP, India

+919589148357

Professional Summary

Data Analyst & ML Enthusiast skilled in Python, SQL, and Power BI. Proven track record of building predictive models with up to 94% accuracy and optimizing data workflows to cut latency by 30%. Passionate about turning complex data into clear, actionable business insights.

Skills

Languages: Python · SQL

AI & ML Frameworks: Scikit-Learn · Pandas · NumPy · OpenCV

Backend: Flask · REST APIs

Frontend & Visualization: Matplotlib · React.js · Stream lit

Tools: Power BI · GitHub · Excel

Education

Sant Hirdaram Girls College | Bachelor of Computer Applications (BCA) Grad 2026

Red Rose School | Class 12th 2023

Red Rose School | Class 10th 2021

Projects

Power BI Data Visualization Dashboards

(https://github.com/bhoomi9589/-Power_BI_Dashboards)

- Sales Performance Tracker: Developed an interactive dashboard to analyse retail sales trends, utilizing DAX measures to calculate Year-over-Year (YoY) growth and profit margins.
- COVID-19 Global Impact Analysis: Cleaned and transformed raw pandemic data using Power Query to visualize infection rates, recovery trends, and mortality statistics across different geographic regions.
- User Experience: Designed user-centric layouts with slicers and drill-through filters, enabling stakeholders to perform deep-dive analysis on specific data segments.

Real-Time Eye Movement Control System | Python, OpenCV, Flask

(https://github.com/bhoomi9589/Real_Time_Eye_Detection_System)

- Built a hands-free computer vision system translating eye and head movements into accessibility commands.
- Implemented an Eye Aspect Ratio (EAR) blink detection algorithm and low-latency Flask interface for gaze-controlled scrolling.

Lung Cancer Prediction System | Python, Scikit-Learn, Flask

(https://github.com/bhoomi9589/Lung_Cancer_Predictor)

- Developed a Logistic Regression model achieving 94% accuracy in identifying early-stage lung cancer risk from patient data.
- Engineered a multilingual Flask web interface to make the diagnostic tool accessible to a diverse, global audience.

College Recommendation System | Python, Random Forest, Pandas, Flask, Google Maps API

(https://github.com/bhoomi9589/College_Recommendation-system)

- Built a predictive application using a Random Forest Classifier to recommend colleges based on 9+ academic parameters.
- Integrated Joblib for low-latency model inference and embedded dynamic Google Maps location data into the user interface.

Calorie & Nutrition Tracker | Python, Flask, React.js, Chart.js, REST API

(https://github.com/bhoomi9589/Calorie_Nutrition_Tracker)

- Built a full-stack web application integrating the Spoonacular REST API to fetch and log real-time nutritional data for thousands of food items.
- Implemented interactive Chart.js visualizations on a React frontend to provide users with clear insights into macronutrient distributions.

Diabetes Predictor | Python, Scikit-Learn, Pandas, NumPy, Matplotlib

(https://github.com/bhoomi9589/diabetes_predictor)

- Built a machine learning pipeline utilizing Logistic Regression, KNN, and Decision Trees to predict diabetes risk levels based on CDC health indicators.
- Pre-processed large-scale healthcare data with Pandas and implemented cluster visualisations via K-Means and PCA to analyse patient segments.
